NISH Tech BV
Teleworking Policy

Confidential – Internal Use Only

Document title	Teleworking Policy
Company	NISH Tech BV
Applies to	Administration, Human Resources, Sales, Talent Acquisition, Fleet, Finance, Bench Employees and Employees/ Consultants assigned to Client/Customer Projects
Owner	Human Resources Department
Version	1.2
Effective date	01/07/2026
Next review	30/06/2027

To be reviewed against the applicable company-level collective bargaining agreement (CBA/CAO) and, where required, submitted to the works council or for trade-union consultation.

1. Purpose

This policy sets out the conditions under which employees of NISH Tech BV may carry out their work from a location other than the company premises or, where applicable, the premises of a client/customer ("teleworking").

- The policy aims to provide a clear, consistent and fair framework that supports

  - ✓ A healthy work-life balance
  - ✓ Business and service continuity
  - ✓ Effective team collaboration
  - ✓ Client/customer requirements
  - ✓ Operational and project needs
  - ✓ Data security and confidentiality and
  - ✓ Compliance with applicable legal and contractual obligations.

For employees/consultants assigned to client/customer projects, teleworking arrangements must also take into account the working arrangements, onsite requirements, security rules, contractual obligations and operational needs established by the relevant client/customer.

2. Legal framework

This policy is established within the framework of applicable Belgian labour law, in particular:

- ✓ Collective Bargaining Agreement No. 85 (CAO/CCT 85), governing structural and regular telework
- ✓ The Act of 5 March 2017 concerning feasible and manageable work, governing occasional telework for reasons of force majeure or personal grounds
- ✓ The applicable legal provisions concerning the right to disconnect
- ✓ The general rules of the employment contract
- ✓ The NISH Tech BV work rules (arbeidsreglement / règlement de travail)
- ✓ Applicable sectoral or company collective agreements and
- ✓ Where applicable, contractual or operational requirements are agreed with clients/customers.

Teleworking does not constitute an unconditional or permanent acquired right. It does not alter the nature of the employment relationship, contractual working time, remuneration, or the employee's general rights and obligations.

For employees/consultants working at a client/customer, any teleworking arrangement is additionally subject to the requirements of the relevant client/customer assignment.

3. Scope and eligibility

3.1 Administration, HR, Sales, Talent Acquisition, Fleet, Finance and Bench Employees

This policy applies to employees of the Administration, Human Resources, Sales, Talent Acquisition, Fleet and Finance Teams and employees who are temporarily not assigned to a client project ("on the bench"), where their tasks can be performed remotely without affecting service quality.

Functions requiring physical presence are excluded from teleworking on days where such presence is required.

Eligibility also requires that the employee:

- ✓ has the necessary autonomy to work remotely
- ✓ has the required equipment
- ✓ has a suitable and secure working environment
- ✓ remains reachable during normal working hours and maintains satisfactory performance and conduct.

Employees on probation or in initial onboarding may be required to work fully on-site until they are sufficiently integrated, at the manager's discretion.

3.2 Employees/Consultants assigned to Client/Customer Projects

Employees/Consultants assigned to a client/customer project are covered by this policy, but their teleworking arrangements are primarily determined by the requirements of the relevant client/customer and the needs of the project/team.

The employee/consultant must comply with the onsite, hybrid and remote-working requirements communicated by the client/customer, provided these requirements are compatible with applicable law, the employee's/consultant's employment conditions and NISH Tech policies.

The client's/customer's working model for the assignment takes precedence over the standard NISH Tech teleworking arrangement applicable to Administration or Bench employees.

4. Telework arrangements

4.1 Administration, HR, Sales, Talent Acquisition, Fleet, Finance and Bench Employees

Eligible employees may telework on one fixed day per week, namely Wednesday. On all other working days, employees are expected to be present at the company premises unless another arrangement has been approved.

The fixed telework day cannot normally be carried over or accumulated, cannot automatically be exchanged for another day, may be cancelled where business needs require office attendance, and does not create an automatic right to a replacement telework day.

Where business needs require attendance at the office, such as meetings, audits, team events, coverage requirements or other operational needs, the manager may require the employee to attend the company premises on Wednesday.

4.2 Employees/Consultants working at a Client/Customer

For employees/consultants assigned to a client/customer, the applicable working model shall be based on the requirements of the client/customer and the needs of the project/team.

A. Client requires full-time onsite presence

Where the client/customer requires the employee/consultant to work onsite five days per week, the employee/consultant is expected to work onsite at the client/customer location for all five working days. The employee/consultant cannot independently replace an onsite day with a teleworking day based on the standard NISH Tech teleworking arrangement.

Example: If the client/customer requires the employee/consultant to be present at the client office from Monday to Friday, the employee/consultant must work onsite from Monday to Friday. Any exception must be explicitly agreed with the client/customer and, where relevant, communicated to and approved by the NISH Tech manager.

B. Client/Customer operates a hybrid working model

Where the client/customer permits hybrid working, the employee/consultant must follow the working arrangement agreed with the relevant client/customer team, project manager or client/customer representative. The employee/consultant should not independently determine which days to work remotely where the project/team has agreed specific onsite days.

Example: If the client/customer team agrees that the team is onsite on Tuesday and Thursday and remote on the other working days, the employee/consultant is expected to follow this team arrangement unless an alternative has been agreed.

The employee/consultant must ensure that their working pattern supports team collaboration, client/customer meetings, workshops, project ceremonies, knowledge-sharing sessions, onboarding activities, stakeholder meetings and other activities where physical presence is required.

C. Client/Customer allows flexible remote working

Where the client/customer allows employees/consultants to determine their remote/onsite days more flexibly, the employee/consultant may use this flexibility provided that the client/customer's expectations are respected, project and team requirements are met, agreed onsite meetings are attended, NISH Tech requirements continue to be respected, and the agreed working arrangement is communicated to the relevant NISH Tech manager where appropriate.

D. Client/Customer requirements change

Client/customer requirements may change during an assignment. Employees/Consultants must adapt their working arrangement accordingly, subject to applicable law and contractual obligations. A employee/consultant must not continue using a previous teleworking arrangement simply because it was previously agreed if the client's current project requirements have changed.

4.3 Priority of Client/Customer Requirements

For employees/consultants assigned to a client/customer project, the following order of consideration applies:

- ✓ Applicable law and mandatory employment requirements
- ✓ The employee's/consultant's NISH Tech employment contract and applicable company policies
- ✓ Client/customer contractual and security requirements
- ✓ The working model established for the client project/team
- ✓ Individual arrangements agreed with the client/customer and NISH Tech.

Where there is uncertainty or a conflict between requirements, the employee/consultant must discuss the matter with their NISH Tech manager and/or HR before changing their working arrangement. Employees/Consultants must not make unilateral decisions that could negatively affect the client relationship, project delivery or contractual obligations.

4.4 Client Office, NISH Tech Office and Other Locations

For employees/consultants, "onsite" normally means the location specified by the client/customer for the assignment. Depending on the project, this may include the client/customer's office, another client/customer-approved working location, a NISH Tech office, a project site, or another location specifically agreed for the assignment.

Working from home or another remote location is permitted only where the applicable working arrangement allows it.

4.5 Exceptional Extended Telework

The exceptional extended telework provisions applicable to Administration/Bench employees remain unchanged. An employee may be authorised to telework on consecutive working days for a continuous period of up to ten (10) working days in the exceptional situations defined by this policy, subject to prior approval.

For employees/consultants, however, any such arrangement must also take into account the client's/customer's requirements and, where necessary, obtain the client's prior agreement. A consultant/employee may not assume that an exceptional NISH Tech telework approval automatically overrides a client/customer onsite requirement.

5. Request and approval procedure

5.1 Administration and Bench employees

The existing request and approval procedure applies. The fixed Wednesday arrangement is confirmed in writing between the employee and their manager. Exceptional extended telework requests must be submitted in advance and in writing, stating the reason, dates and remote location. Approval is at the reasonable discretion of the manager in consultation with HR, taking into account business continuity, team coverage and the feasibility of remote work.

5.2 Employees/Consultants

Employees/Consultants must respect the working model agreed for their client/customer assignment. Where an employee/consultant wishes to deviate from the established client/project working arrangement, the employee/consultant must discuss this in advance with the relevant client/customer contact or project manager, where appropriate, and the NISH Tech manager and/or HR, where required.

An employee/consultant must not assume that approval from only one party is sufficient where both client and NISH Tech approval are required.

Examples of situations requiring prior discussion include replacing an agreed onsite day with a remote day, requesting additional remote days, working remotely from another country, temporarily working from another location, changing agreed team onsite days, extended absence from the client/customer location, or any arrangement that could affect client/customer delivery or contractual commitments.

6. Working time, availability and right to disconnect

Teleworking does not change the employee's contractual working time, schedule or workload.

Employees and consultants are expected to:

- ✓ be reachable and available during normal working hours
- ✓ record working time in the usual manner

- ✓ attend required meetings
- ✓ remain available through agreed communication channels
- ✓ participate actively in their team and project activities and maintain the same professional standards whether working onsite or remotely.

For employees/consultants, availability must also align with the working hours and collaboration practices established by the client/customer project, provided these remain compatible with the employee's/consultant's contractual working time and applicable law.

The right to disconnect remains applicable. Employees are not expected to respond to work communications outside their normal working hours except in genuinely urgent or exceptional circumstances.

7. Equipment, expenses and costs

The existing NISH Tech rules concerning equipment, expenses and teleworking allowances continue to apply.

Any company-provided equipment remains NISH Tech property and must be used in accordance with the applicable IT and acceptable-use policies.

For consultants/employees working at client/customer premises:

- ✓ client/customer-provided equipment may be used where required by the client/customer
- ✓ client/customer security and acceptable-use requirements must be respected
- ✓ NISH Tech equipment remains subject to NISH Tech IT policies and
- ✓ Consultants/employees must immediately report any loss, theft, damage or security incident involving company or client/customer equipment.

No additional expenses are automatically reimbursed solely because a employee/consultant is required to work onsite at a client location. Travel and other project-related expenses remain subject to the applicable NISH Tech expense policy and/or contractual arrangements.

8. Data security and confidentiality

All obligations regarding confidentiality, professional secrecy and protection of personal data (GDPR) apply equally when working remotely, at the NISH Tech office or at a client/customer location.

Employees/Consultants must additionally comply with the client's security, confidentiality and information-security requirements applicable to the assignment.

Employees and consultants must:

- ✓ use approved devices, networks, VPNs and applications
- ✓ keep software and security updates current

- ✓ use strong authentication
- ✓ lock devices when unattended
- ✓ protect confidential and personal information
- ✓ avoid storing company or client data on unauthorised private devices
- ✓ avoid using unsecured networks for confidential work
- ✓ prevent third parties from seeing or hearing confidential information and report security incidents or data breaches without delay.

Where NISH Tech and the client/customer have different security requirements, the employee/consultant must immediately seek guidance from the NISH Tech manager/IT or the relevant client/customer security contact rather than choosing independently which requirement to follow.

9. Health, safety and insurance

Employees and consultants must work from a safe and suitable workspace appropriate for their activities.

When working at a client/customer location, employees/consultants must comply with the customer's/client's applicable health and safety instructions, access procedures, emergency procedures and workplace rules.

When working remotely, the consultant/employee remains responsible for maintaining a suitable working environment.

Accidents occurring during telework within the agreed working time and at the agreed telework location are, in principle, treated in accordance with the applicable workplace accident insurance rules.

Any accident or incident must be reported promptly to NISH Tech HR and, where relevant, to the client/customer according to the applicable procedure.

10. Suspension, modification and termination of telework

Telework arrangements are reversible and may be modified or terminated where operational, organizational, performance, security, client/customer or business requirements justify such action, subject to applicable law and contractual arrangements.

For employees/consultants, the teleworking arrangement may also change when the client/customer changes its working model; the employee/consultant moves to another project; the project enters a different delivery phase; team collaboration requirements change; the client/customer requires additional onsite presence; client security requirements change; or the consultant's/employee's role or responsibilities change.

Where the client/customer requires increased onsite presence, the employee/consultant is expected to comply with the revised requirement unless another arrangement has been formally agreed.

When a client/customer assignment ends, the employee's/consultant's working arrangement will be reassessed based on the next assignment or, if temporarily unassigned, the NISH Tech Bench policy.

11. Change of Client.consultant Assignment

When an employee/ consultant moves from one client/customer project to another, the teleworking arrangement applicable to the previous assignment does not automatically carry over to the new assignment.

The employee/consultant must follow the working model applicable to the new client/customer and project.

For example:

- ✓ Client/Customer A may require five days onsite
- ✓ Client/Customer B may operate a two-day hybrid model
- ✓ Client/Customer C may permit predominantly remote work.

The employee/consultant must therefore adapt to the working arrangement applicable to the current assignment. A previous employee's/client's hybrid or remote-working arrangement cannot be used as a basis for requesting the same arrangement at a new client/customer.

12. Bench Employees

When an employee/ consultant is no longer assigned to a client/customer project and is placed "on the bench", the employee/consultant becomes subject to the NISH Tech Bench working arrangement applicable at that time.

Unless otherwise agreed, the standard NISH Tech teleworking rules for Bench employees apply.

In particular, the standard fixed weekly teleworking day for eligible Bench employees is Wednesday, subject to the conditions and exceptions defined in this policy.

When an employee/consultant starts a new client/customer assignment, the applicable client/customer working arrangement becomes effective from the start of that assignment.

13. Manager and Employee/Consultant Responsibilities

Employees/Consultants are responsible for:

- ✓ understanding the client's working model

- ✓ following agreed onsite and remote-working days
- ✓ attending required onsite activities
- ✓ communicating changes or difficulties in advance
- ✓ maintaining availability during working hours
- ✓ respecting both NISH Tech and client policies
- ✓ protecting company and client/customer information and escalating conflicts or uncertainties rather than making unilateral decisions.

NISH Tech Managers are responsible for:

- ✓ ensuring employees/consultants understand the applicable working arrangement
- ✓ monitoring whether the arrangement supports project and business needs
- ✓ discussing material changes with the consultant
- ✓ coordinating with HR where necessary and ensuring that client/customer requirements are considered without compromising applicable employment rights.

Clients/Customers: Where the client/customer defines the working model for an assignment, NISH Tech expects employees/consultants to respect those requirements as part of the professional obligations associated with the assignment.

14. Compliance

Failure to comply with this policy may lead to withdrawal or modification of the telework arrangement and, where appropriate, measures under the work rules and applicable employment law.

For employees/consultants, failure to comply with agreed client/customer onsite or working arrangements may additionally have consequences for the employee's/consultant's assignment and the client/customer relationship.

Repeated or serious non-compliance may result in reassignment, withdrawal of teleworking flexibility or other appropriate measures, subject to applicable law and company procedures.

15. Practical Examples

Example 1 – Client/Customer requires five days onsite
A consultant/employee is assigned to Client/Customer A. Client/Customer A requires all team members to work onsite from Monday to Friday.
Result: The consultant/employee works onsite five days per week. The standard NISH Tech Wednesday telework arrangement does not apply to this client/customer assignment.

Example 2 – Client/customer has agreed team hybrid days
Client /Customer B operates a hybrid model. The project team agrees that Tuesday and Thursday are onsite days and the remaining days can be worked remotely.
Result: The consultant/employee follows the team's agreed Tuesday/Thursday onsite arrangement and works remotely on the other agreed days.

Example 3 – Consultant/Employee wants to change an onsite day
The consultant/employee wants to work remotely on Thursday because it is more convenient personally, but Thursday has been established as an onsite team day.
Result: The consultant/employee should not unilaterally change the arrangement. The consultant /employee must request and obtain the appropriate agreement before working remotely.

Example 4 – Client.Customer changes its policy
A consultant/employee was previously allowed to work remotely three days per week. The client/customer changes its policy and requires employees/consultants to be onsite three days per week.
Result: The consultant/employee must follow the new client requirement unless another arrangement has been formally agreed.

Example 5 – Consultant/Employee moves to another client/customer
A consultant/employee moves from Client/Customer A, which required five days onsite, to Client /Customer B, which permits two onsite days per week.
Result: The consultant/employee follows Client/Customer B's agreed working model. The previous Client/Customer A arrangement does not carry over.

Example 6 – Consultant/employee moves to the Bench
A consultant's/employee's client/customer assignment ends and the employee/consultant is temporarily unassigned.
Result: The consultant/employee follows the NISH Tech Bench working arrangement until a new client/customer assignment begins.

Example 7 – Client/Customer requires onsite presence for an important workshop
A normally hybrid client requires the entire project team to attend an important workshop onsite on a day that would normally be a remote day.
Result: The consultant/employee attends onsite as required by the project/team arrangement. The remote day is not automatically moved to another day unless an alternative is agreed.

16. Final Principle

For NISH Tech employees working in Administration, HR, Sales, Talent Acquisition, Fleet, Finance or on the Bench, the NISH Tech teleworking arrangement applies.

For employees/consultants assigned to a client/customer, the working model applicable to the client /customer assignment must be respected. Client/Customer requirements regarding onsite presence, hybrid working and team collaboration take priority over the standard NISH Tech

teleworking pattern, subject to applicable law, contractual rights and NISH Tech approval requirements.

Employees/Consultants are expected to be flexible and align their working location with the needs of the client/customer, the project and the team. Teleworking is a working arrangement, not an individual entitlement to choose the working location independently of the client/customer project requirements.
